

Lab - PowerShell - Create Azure Web App Deployment Slot

To begin with the Lab

Summary

This lab demonstrates how to create and manage a **Deployment Slot** for an existing Azure Web App using Azure PowerShell. You will create a staging slot, verify it, swap it with the production slot, and delete it if no longer required.

Understanding

A **Deployment Slot** is a separate deployment environment for an Azure Web App. It allows you to deploy and test a new version of your application before making it live. After testing, you can swap the staging slot with the production slot to minimize downtime.

Example:

An application is already running in production. A new version is deployed to a **staging** slot, tested, and then swapped with the production slot so users receive the updated application without interruption.

Lab Steps

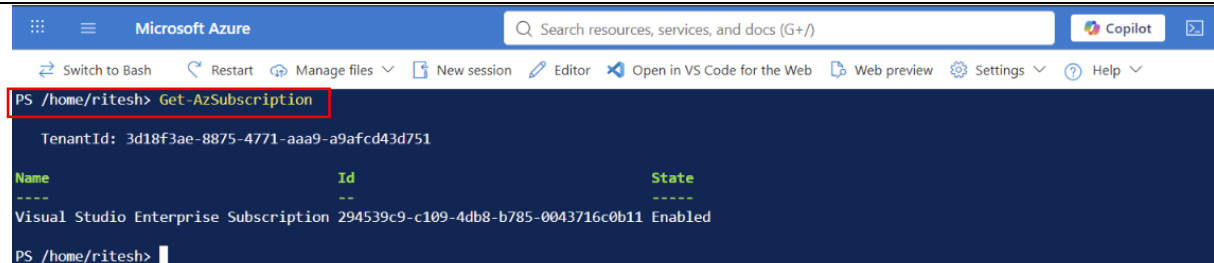

Step 1: Sign in to Azure

- Open Windows PowerShell.
- Sign in using your Azure account.

Step 2: Select the Subscription

- View available subscriptions.
- Run this Command.

Get-AzSubscription

```
PS /home/ritesh> Get-AzSubscription

TenantId: 3d18f3ae-8875-4771-aaa9-a9afcd43d751

Name                Id                State
----                -
Visual Studio Enterprise Subscription 294539c9-c109-4db8-b785-0043716c0b11 Enabled

PS /home/ritesh>
```

- Select the required subscription.
- Run this Command

Set-AzContext -SubscriptionName "Visual Studio Enterprise Subscription"

```
Microsoft Azure
Search resources, services, and docs (G+/)

Switch to Bash Restart Manage files New session Editor Open in VS Code for the Web Web preview

PS /home/ritesh> Get-AzSubscription

TenantId: 3d18f3ae-8875-4771-aaa9-a9afcd43d751

Name Id State
---- --
Visual Studio Enterprise Subscription 294539c9-c109-4db8-b785-0043716c0b11 Enabled

PS /home/ritesh> Set-AzContext -SubscriptionName "Visual Studio Enterprise Subscription"

Tenant: 3d18f3ae-8875-4771-aaa9-a9afcd43d751

SubscriptionName SubscriptionId Account Environment
-----
Visual Studio Enterprise Subscription 294539c9-c109-4db8-b785-0043716c0b11 MSI@50342 AzureCloud

PS /home/ritesh> 
```

- Choose **standard Tier**
- Run this command

```
Set-AzAppServicePlan `
-ResourceGroupName "Webapp" `
-Name "WebAppServicePlan" `
-Tier "Standard" `
-WorkerSize "Small"
```

```
Microsoft Azure
Search resources, services, and docs (G+/) Copilot

Switch to Bash Restart Manage files New session Editor Open in VS Code for the Web Web preview Settings Help

PS /home/ritesh> Set-AzAppServicePlan
>> -ResourceGroupName "Webapp" `
>> -Name "WebAppServicePlan" `
>> -Tier "Standard" `
>> -WorkerSize "Small"

Name State ResourceGroup EnabledHostNames Location
-----
WebAppServicePlan Webapp East US

PS /home/ritesh> 
```

Step 3: Create a Deployment Slot

- Create a **staging** deployment slot for the existing Web App.
- Run this Command.

```
New-AzWebAppSlot `
-ResourceGroupName "Webapp" `
-Name "Webapp-eus-12" `
-Slot "staging"
```

- Wait for the slot to be created.
- Deployment slot Created successfully.

```
Microsoft Azure
Search resources, services, and docs (G+/)
Copilot

Switch to Bash Restart Manage files New session Editor Open in VS Code for the Web Web preview Settings Help

PS /home/ritesh> Set-AzAppServicePlan
>> -ResourceGroupName "Webapp"
>> -Name "WebAppServicePlan"
>> -Tier "Standard"
>> -WorkerSize "Small"

Name State ResourceGroup EnabledHostNames Location
----
WebAppServicePlan Webapp East US

PS /home/ritesh> New-AzWebAppSlot
>> -ResourceGroupName "Webapp"
>> -Name "Webapp-eus-12"
>> -Slot "staging"

Name State ResourceGroup EnabledHostNames Location
----
Webapp-eus-12/staging Running Webapp {webapp-eus-12-staging.azurewebsites.net, webapp-... East US

PS /home/ritesh>
```

Step 4: Verify the Deployment Slot

- Go to the Exist Webapp.
- Navigate To Deployment Slot.

Microsoft Azure

Home > Resource Manager | Resource groups > Webapp

Webapp-eus-12
Web App

Webapp-eus-12 | Deployment slots

Save Discard Add Swap Logs Refresh Send us your feedback

Deployment slots are live apps with their own hostnames. App content and configurations elements can be swapped between two deployment slots, including the production slot.

Name	Status	App service plan	Traffic %
webapp-eus-12 PRODUCTION	Running	WebAppServicePlan	100
Webapp-eus-12-staging	Running	WebAppServicePlan	0
